The degree to which a firm sources its capital from debt as opposed to equity markets is within limits a matter of its choice — it can issue more debt or more equity; consequently one approach to estimation is simply to take the ratio of debt to equity present in the firm at the time of the assessment. By contrast, as will become clear in this chapter, WACC estimation requires very detailed knowledge of financial markets — of stock market volatilities, bond market yields and the quantitative analysis thereof. Each country has a different Equity Risk Premium.
