E Stadtmauer. A systematic review of taxane-containing
regimens for metastatic breast cancer.

Lungcancerinpeoplewhohavenever smokediscurrentlythe5th3leadingcaus
Data from these two randomized trials demonstrated that the
combination of a taxane with capecitabine or gemcitabine could
improve OS in patients with metastatic breast cancer. In a
recently reported phase II trial, lapatinib was tested as
first-line therapy for breast cancer patients with tumors that
express large amounts of erbB2. Management comprehensive
resource provides authoritative knowledge of the most
up-to-date prevention and treatment strategies for thoracic
malignancies.

This subset of patients is typically characterized by: . It has to be considered
More. Patients relapsing during adjuvant endocrine treatment
are considered resistant to the specific endocrine drug and
should be offered alternative therapies.
