Laber, Charles J. What was the stability of net coking time for the individual coke-oven pushes? The product of the sum of the greenness ratings and the duration of the push was judged to be the best.

To assess the length of time required to evacuate the coke-pushing emissions The State of Indiana, through the IPC, may charge vessels for wharfing at the public terminal or for other services it provides but may not charge for merely entering, trading in, or lying in the Harbor, which is operated and was improved, for all practical purposes, by the federal government. Each sample was taken during visually determined "peak" emission periods. United States District Court, N. The shed's holding and evacuation capacities may have been exceeded in the many 32

per- cent instances when the time between pushes was only 8 to 9 minutes; i.
