It should be added that although the Arab participants on the whole missed around half of the multiple syllable words i. New to MyKarger? Unexpectedly, the second- and third-graders did not display a correlation between the two measures. Perfetti, L. On the other hand, readers who ignore the diacritics can read fast. However, it is not clear to what extent these segmentation skills are also applied when reading real and familiar words. Sometimes, however, meaning and concept cannot be so easily differentiated.

However, the form of a word may be motivated by the forms of other words in a language. A strong correlation between orthographies and morphological units makes linking consistent grammatical and lexical representation and spelling units in speaker-writers a key research goal.
